## **Disclaimer**

The STCS Annual Report covers all solid organ transplantation (SOT) activities on the Swiss national level since May 2008 (and to a reduced extent also since January 2008). The report is comprehensive and contains all combinations of simultaneous solid organ transplants, consecutive transplants, centre-specific activities and key outcomes of all transplantation programs including limited reporting of infectious disease and cancer occurrence. To serve the aim of comprehensive transplant outcome reporting, the report is based on unselected patient populations of the different transplant programs and transplant centres. **However, it is important to note that the report is not designed for and does not serve the purpose of center-specific outcomes comparison.**

## **2 News and updates**

News:

- Transplantations from Kidney Paired Donation (Cross-over Living Donation) (KPD) are newly reported in Chapter 3.7.
- A short description of the specific population of DCD Donor Liver Recipients is included in Chapter 11.2.

### **3 Patients, transplantations and transplanted organs**

#### **3.1 Definitions applied**

- Enrolment refers to the inclusion of all patients into the Swiss Transplant Cohort Study (STCS) from 1 May 2008 until 31 December 2019. From those patients, the follow-up information from the date of transplantation until end of follow-up (date of death or censoring) is included in the report.
- First transplantation:
  - Patients with a first transplantation in their medical history at the time of STCS enrolment
- Re-transplantation:
  - Patients with a repetition of the same type of transplantation (Re-Tpx)
  - Example: Re-Tpx of a kidney allograft after failure of a previous kidney graft
- Second transplantation:
  - Patients with a second transplantation that differs from the preceding transplantation type
  - Example: Transplantation of a pancreas following a single Kidney transplantation
- Simultaneous transplantation:
  - Simultaneous (eg double or triple) transplantation refer to multiple organs that originate from the same donor (e.g. Kidney-Pancreas).
  - Simultaneous transplantation can be categorized as first, re- or second transplantation.
- Every transplant procedure can consist of a single or simultaneous transplantation.
- Knowledge on previous transplantation from the pre-STCS era (before May 2008) is considered. Patients may thus be enrolled within the STCS as a re- or a second transplantation.
- Sequences of previous Islets transplantations have been counted as one prior transplantation.
- Human stem cell transplantations are not considered in this report.

## 3.2 Overview and baseline demographic data

The following tables list the number of patients enrolled in the STCS, the number of transplantations performed, and organs transplanted. Table 1 and 2 show patients according to their first STCS transplantation.

### 3.3 STCS patient enrolment by calendar time

Figure 1 shows the patient enrolment activity by quarter from May 2008 till December 2019.

Figure 1: Quarterly patient enrolment by donor type

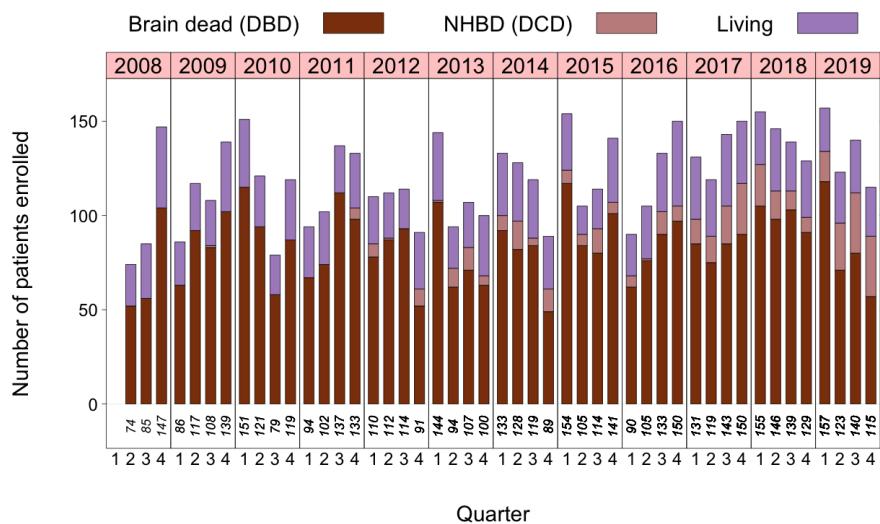

Figure 2: Cumulative patient enrolment

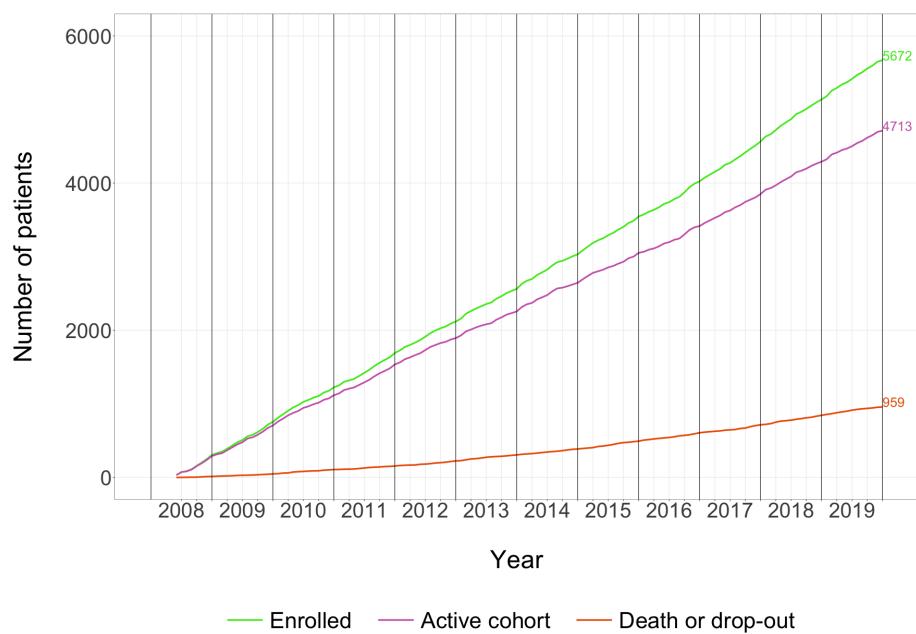

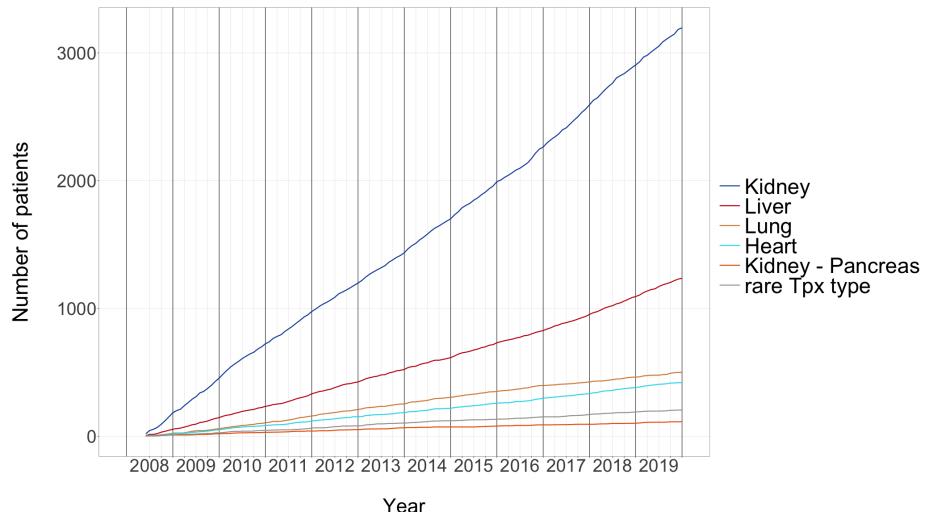

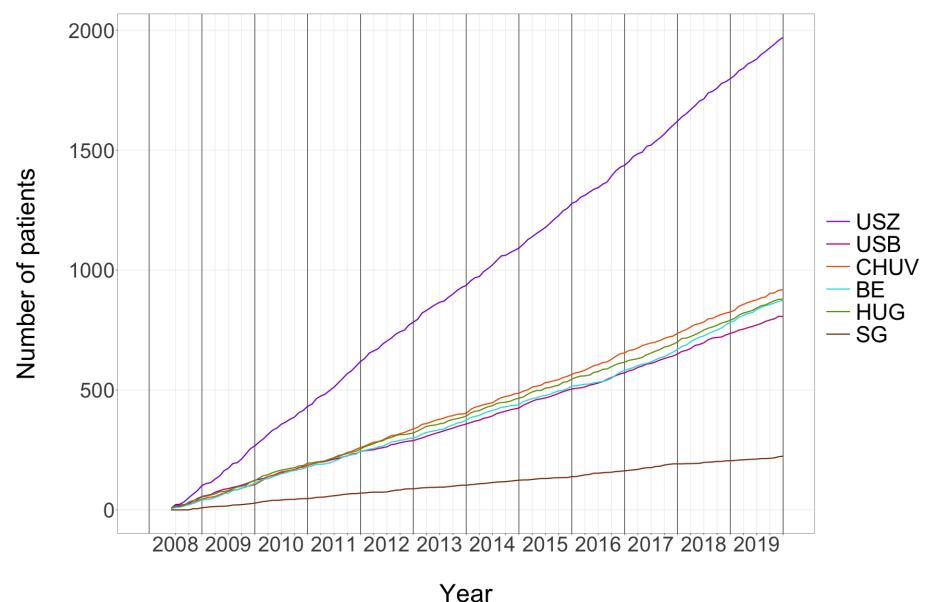

Figure 3: Cumulative patient enrolment by Tpx type

'Rare Tpx type' includes: Islets, Pancreas, Small bowel, Kidney - Kidney, Kidney - Liver, Kidney - Islets, Kidney - Heart, Kidney - Lung, Liver - Lung, Liver - Pancreas, Heart - Lung, Islets - Liver, Pancreas - Small bowel, Kidney - Pancreas, Kidney - Islets - Liver, Islets - Liver - Lung.

### 3.6 Transplantations other than Kidney by centre

Data from following rare transplantations are not shown: Small bowel (1, HUG), Liver - Lung (4, HUG), Liver - Pancreas (1, HUG), Heart - Lung (1, USZ), Islets - Liver (1, USZ), Pancreas - Small bowel (1 each in USZ and HUG) and Islets - Liver - Lung (1, HUG).

Figure 8: Number of patients with first STCS Liver, Lung, Heart, Pancreas or Islets Tpx

### 3.7 Single Kidney and Liver transplantation by donor type

Figures 9 and 10 show all STCS single Kidney and Liver transplantation by donor type (Donation after Brain Death (DBD), non-heart-beating donor (Donation after Cardiac Death, DCD) (NHBD), Living). Figures 11 and 13 present proportions of donor types in all single Kidney and Liver transplantation within centres.

E-Unknown	55	30	6	-	17	2
E-Perm unknown	39	-	-	-	-	39

Remark: 'C' stands for 'current consent status' and 'E' denotes the consent status at enrolment.

---

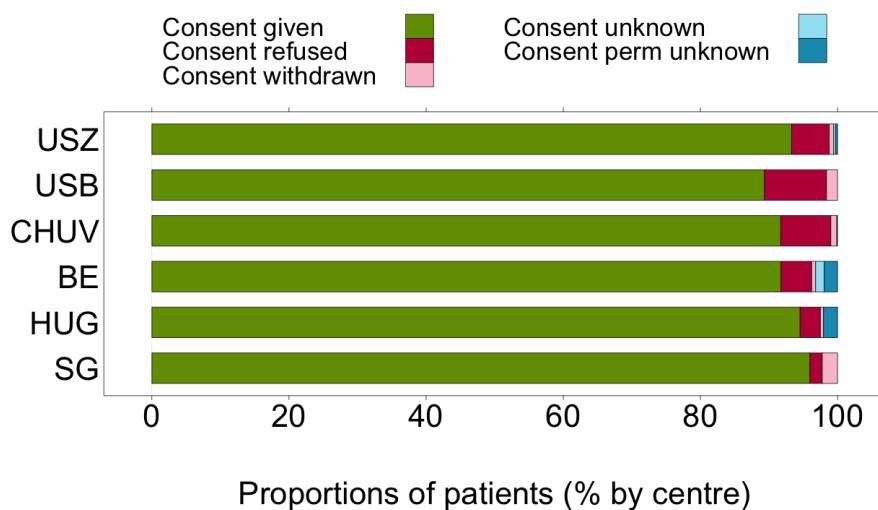

Figure 14: Patients current consent status

In Figure 15, current patients' status (i. e. last known consent status) is given proportionally within each centre.

## 5 Bio-samples

Table 7 presents the number of patients with and without bio-samples. The consent status for patients with at least one bio-sample is at the time point of the first drawn bio-sample. Consent status at enrolment is taken for patients without any bio-samples.

Figure 20: Rate of infectious disease events by pathogen and Tpx type

### Rate of infectious disease events

Remark: The rate of ID events is defined as the number of ID events per year of observation time. It is calculated as the number of ID events divided by the total person-years of follow up according to transplantation program. Some backlog in the reporting of ID events cannot be excluded.

## 7 Follow-up

Percentages in Figures 21 and 22 have to be read as proportions of transplantation for which at least the 6 month or the 12 month FUP visit was performed.

Figure 21: Number of Tpx with 6 month FUP

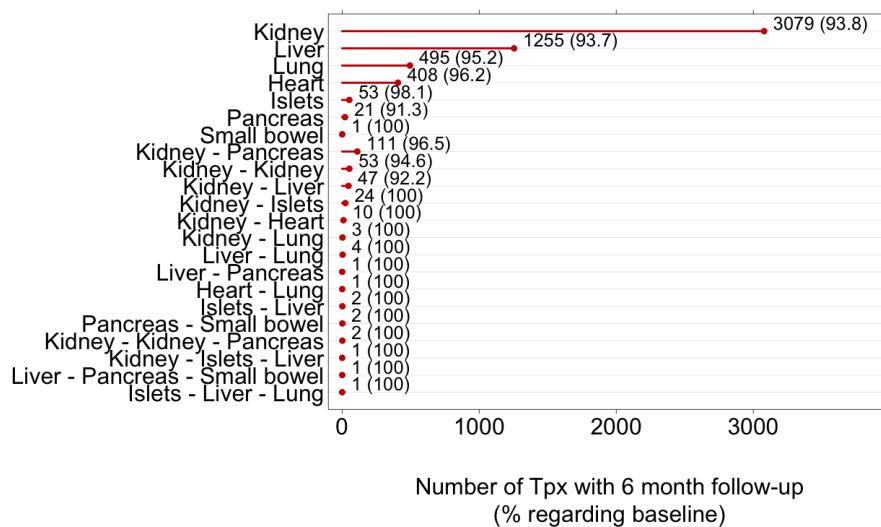

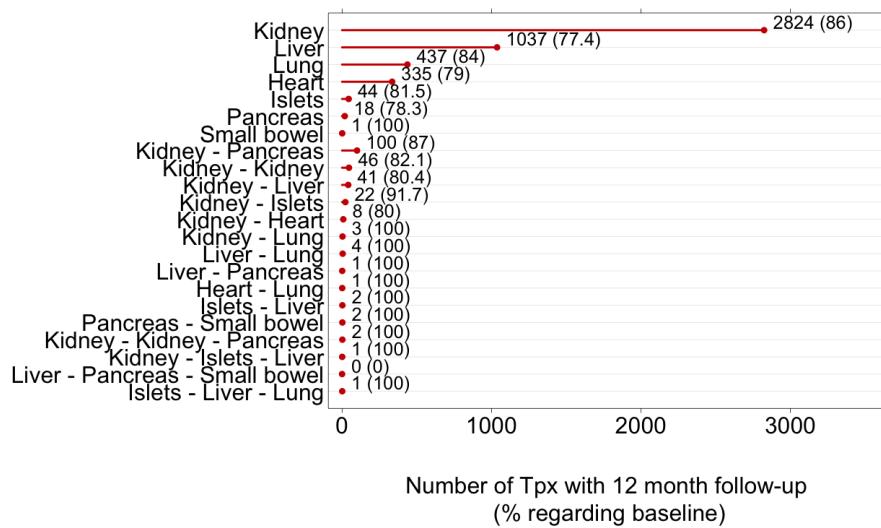

Figure 22: Number of Tpx with 12 month FUP

## 8 Mortality

In the following, survival probability estimates can only be descriptively interpreted since the precision is low due to the small number of patients at risk at the end of FUP. In Figure 23, the 95%-confidence interval (CI) is given. Furthermore, survival probability estimates are not adjusted for potential risk factors (in Figures and Tables).

## 8.4 Mortality in first single Kidney transplantation

Overall survival for patients with single Kidney transplantation as first STCS transplantation is presented separated by the donor type. In Figure 27, category 'Living' is separated in 'Living, ABO c' and 'Living, not ABO c'. The letter 'c' stands for 'compatible'.

## 9 Graft failure and primary non-function

Failure and primary non-function in an allograft are considered as one, no distinction is therefore made in this section.

### 9.1 Graft failure

Graft failures (incl. grafts with primary non-function) are counted on organ-level (Tables 17 and 18). Table 16 gives a summary of numbers of graft failures on patient- and organ-level. In addition to, numbers of organs with primary non-function are given separately in Table 19.

## 9.2 Graft failure free survival

In the following, estimates of graft failure free survival are not adjusted for potential risk factors. Only the first STCS transplantation of each patient is considered. In Figure 28 and 29, both single Kidney and double Kidney transplantations are included as mentioned previously. Also the Kidney-Kidney-Pancreas transplantation (USZ) are included in Kidney-Pancreas transplantation. In contrast, Figure 30 shows graft failure free survival only for patients with first STCS single Kidney transplantation.

### 9.3 Cumulative incidence of graft failure

The cumulative incidence (CumInc) of a graft failure is the probability for a graft failure within the reported time period. CumInc functions for graft failure are not adjusted for potential risk factors (illustrated in Figures and Tables). In Figure 31, Table 20 and Table 21 double kidneys are counted as one kidney.

## 9.4 Graft failure and number of HLA mismatches

Figures 34-37 show the cumulative incidence functions for graft failures separated by (major) transplantation and the number of HLA mismatches<sup>1</sup> between donor and recipient at STCS enrolment. It is distinguished between mismatches for HLA-A, HLA-B and HLA-DR and the total number of HLA mismatches.

Figure 34: Cumulative incidence of graft failure in Kidney or Kidney-Kidney Tpx recipients by HLA mismatches

<sup>1</sup>The number of mismatches refers to the number of HLA antigens of the donor that are not expressed in the recipient. If the donor is homozygous for a certain HLA locus, only one mismatch was counted. Groups with less than 10 patients at time of tpx are not shown. NA stands for missing HLA information. The number of patients at risk for some tpx is lower compared to the number of tpx due to missing HLA information.

## A Cohort of all solid organ recipients transplanted since January 2008

The STCS officially started to enrol patients on 1 May 2008. By request from the Swiss Federal Office of Public Health, patients transplanted in the reporting period from 1 January 2008 until 30 April 2008 were retrospectively added to the STCS. The STCS authorities decided to capture and report only “mini-minimal” data for these patients. Therefore for the full reporting period (January 2008 to present) only data on the transplanted organ, overall mortality and failure-free survival can be presented.

### A.1 Overview

The following table lists the number of patients enrolled and transplantations performed, it shows patients according to their first STCS transplantation in the period: January 2008 - April 2008.

## A.2 Mortality by transplantation

The following figure includes all the patients transplanted in the period: January 2008 - December 2019 and is analogous to Figure 24.

---

Figure 43: Overall survival since January 2008 for frequent transplantation types

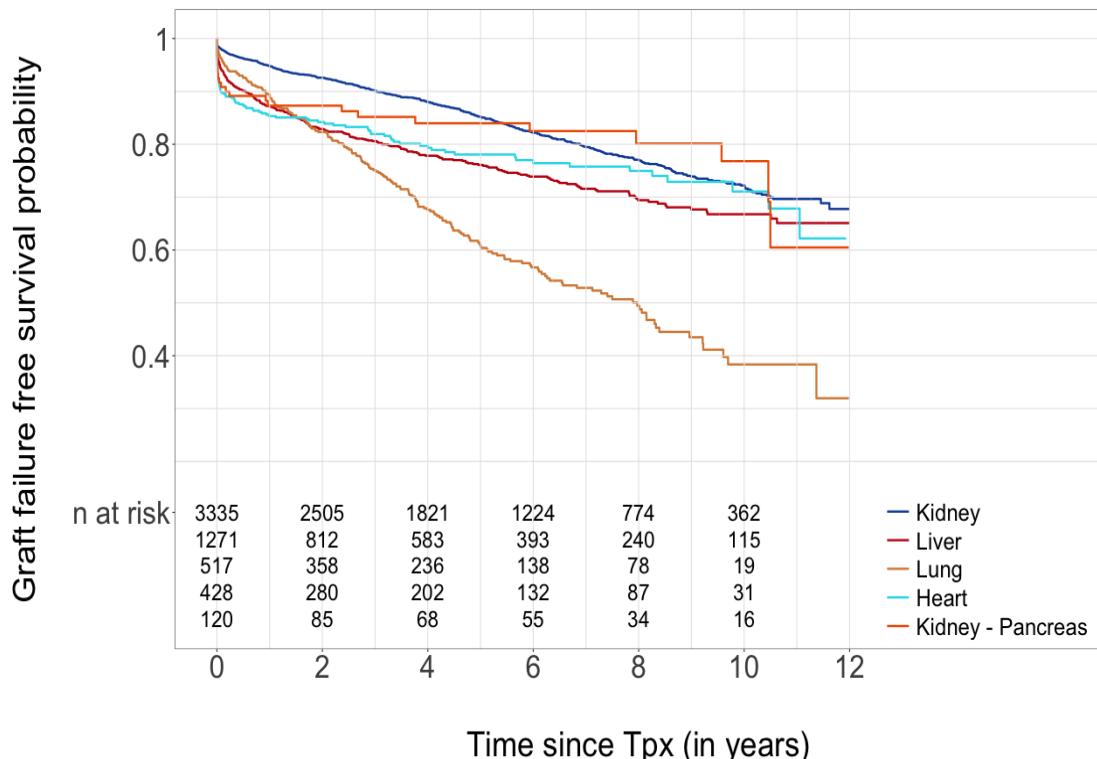

56 Kidney-Kidney Tpx are included in Kidney Tpx. 2 Kidney-Kidney-Pancreas Tpx are included in Kidney-Pancreas Tpx.

### A.3 Graft failure free survival

The following figure includes all the patients transplanted in the period: January 2008 - December 2019 and is analogous to Figure 28. The rate estimates for graft failure free survival are not adjusted for potential risk factors. Only the first STCS transplantation of each patient is considered.
