## **Disclaimer**

The STCS Annual Report covers all solid organ transplantation (SOT) activities on the Swiss national level since May 2008 (and to a reduced extent also since January 2008). The report is comprehensive and contains all combinations of simultaneous solid organ transplants, consecutive transplants, centre-specific activities and key outcomes of all transplantation programs including limited reporting of infectious disease and cancer occurrence. To serve the aim of comprehensive transplant outcome reporting, the report is based on unselected patient populations of the different transplant programs and transplant centres. **However, it is important to note that the report is not designed for and does not serve the purpose of center-specific outcomes comparison.** This analysis is currently underway in the "STCS Benchmarking project".

### 3 Patients, transplantations and transplanted organs

Definitions applied:

- Enrolment refers to the inclusion of all patients into the Swiss Transplant Cohort Study (STCS) from 1st of May 2008 until 31st of December 2016. From those patients, the follow-up information until the date of data extraction (7th of March 2017) is included in the report.
- First transplantation:
  - Patients who have a first transplantation (Tpx) in their medical history at the time of STCS enrolment
- Re-transplantation:
  - Patients with a repetition of the same type of transplantation (Re-Tpx)
  - Example: Re-Tpx of a kidney allograft after failure of a previous kidney graft
- Second transplantation:
  - Patients who have a second Tpx type that differs from the preceding Tpx type
  - Example: Tpx of a pancreas following a single kidney Tpx
  - Simultaneous (eg double or triple) Tpx can be categorized as first, re- or second Tpx
- Every Tpx can consist of a single or simultaneous double or triple Tpx. Simultaneous (eg double or triple) Tpx refer to multiple organs that originate from the same donor (e.g. kidney-pancreas).
- Knowledge on previous Tpx from the pre-STCS era (before May 2008) is considered. Patients may thus be enrolled within the STCS as a re- or a second Tpx.
- Sequences of previous islet Tpx have been counted as one prior Tpx.
- Human stem cell transplantations are not considered in this report.

### 3.1 Overview

The following tables list the number of patients enrolled in the STCS, Tpx performed, and organs transplanted. Table 1 and 2 show patients according to their first STCS Tpx.

\*\*\* ID: infectious disease event

# Out of 48 patients that had a Kidney Tpx and a GF, 9 patients had a re or second Tpx and died later on and 39 patients died after GF without a re or second Tpx. In Chapter "Mortality", patients with GF but without re or second Tpx are censored for mortality at the time point of GF.

Remark: 'Total' refers to the total number of patients with Tpx presented in this table.

### 3.2 STCS patient enrolment by calendar time

### 3.6 Single Kidney and Liver Tpx by donor type

Figures 12 and 13 show all STCS single kidney and liver Tpx by donor type (Donation after Brain Death (DBD), Non heart beating donor (Donation after Cardiac Death, DCD) (NHBD), Living). Figures 14 and 15 present proportions of donor types in all single kidney and liver Tpx within centres.

E-Withdrawn	0	0	0	0	0	0
E-Unknown	40	26	2	0	11	1
E-Perm unknown	27	0	1	0	0	26

Remark: 'C' stands for 'current consent status' and 'E' denotes the consent status at enrolment.

In Figure 17, current patients' status (i. e. last known consent status) is given proportionally within each centre.

## 5 Bio-samples

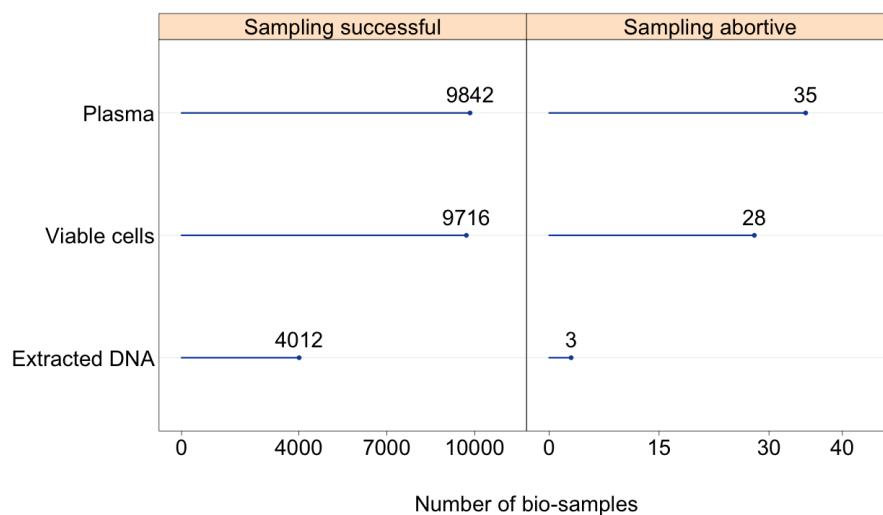

Table 7 presents the number of patients with and without bio-samples. The consent status for patients with at least one bio-sample is at the time point of the first drawn bio-sample. Consent status at enrolment is taken for patients without any bio-samples.

---

Table 7: Number of patients with bio-samples

	Total	Sample (%)	No sample (%)
Total	4023	3742 93.0	281 7.0

## 6 Infectious disease events

In Tables 8 and 9, descriptive information about patients with infectious disease (ID) events and types of ID events are given. Table 10 and Figure 20 give ID event rates by Tpx and pathogen type.

---

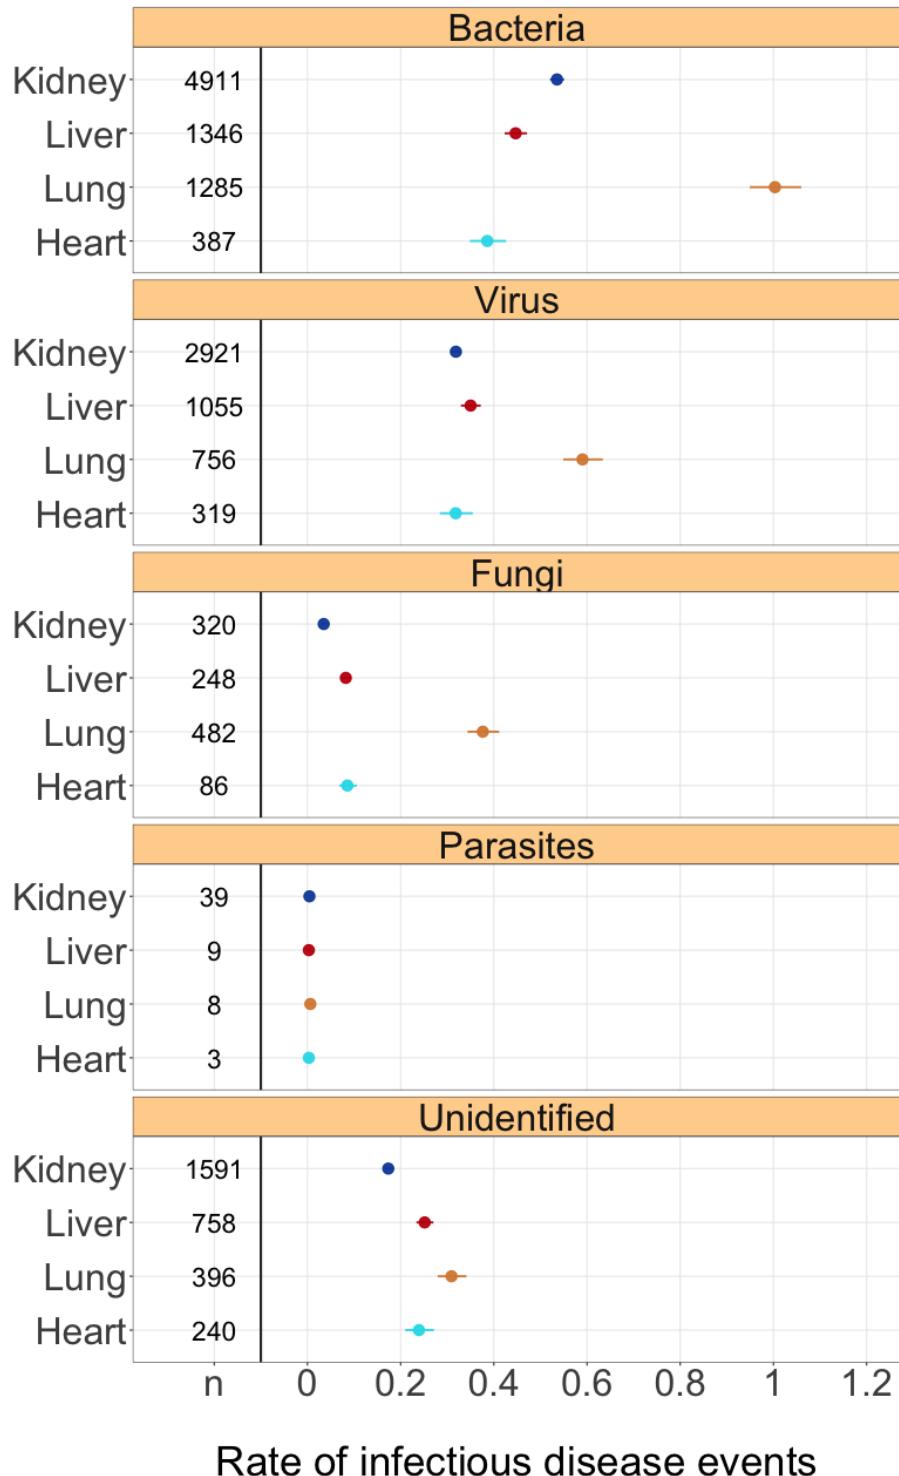

Table 8: Patients with infectious disease events

	N	% (sd)
Total number of patients	4023	
Patients with at least one ID event	2896	72%

## 7 Follow-up

Percentages in Figures 21 and 22 have to be read as proportions of Tpx for which at least the 6 month or the 12 month FUP visit was performed.

---

Figure 21: Number of Tpx with 6 month FUP

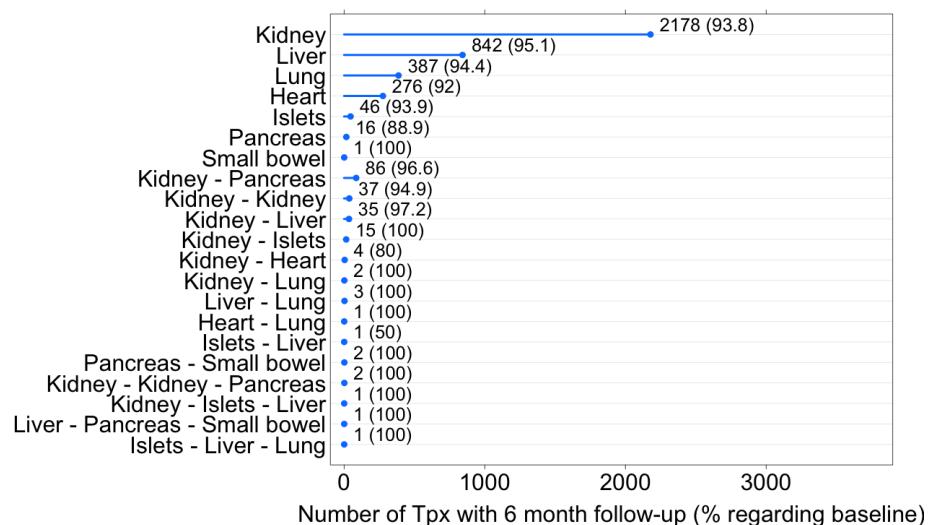

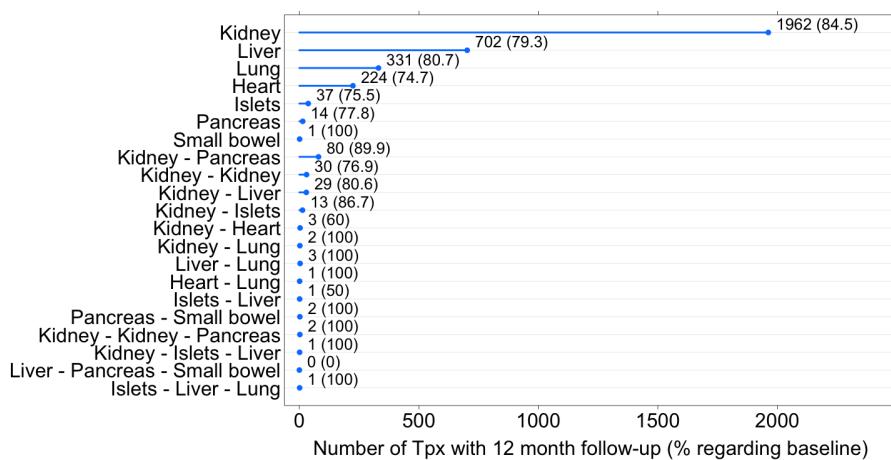

Figure 22: Number of Tpx with 12 month FUP

## 8 Mortality

In the following, survival rate estimates can only be descriptively interpreted since the precision is low due to the small number of patients at risk at the end of FUP. In Figure 23, the 95%-confidence interval (CI) is given. Furthermore, survival rate estimates are not adjusted for potential risk factors (in Figures and Tables).

### 8.1 Overall

Table 11: Follow-up information of patients

	Follow-up
Median follow-up duration (years)	3.56
IQR (years)	1.54 - 5.94
Maximum follow-up (years)*	8.85
Number of deaths**	545
Patients with (at least one) graft failure	366
Patients lost to follow-up***	42

\* Time period from 2nd of May 2008 to 7th of March 2017

\*\* 39 deaths were observed in Kidney patients with GF and no re or second Tpx following GF. Due to inconsistencies in data collection for death after GF in renal TPX recipients across centres, those death cases are removed for mortality shown in Table 13 and Figures 23.

\*\*\* More details in Table 12.

Remarks: 'Cum.' stands for 'Cumulative'. The 95%-CI is given for 'Mortality'. The time point 'Overall' refers to the maximal follow-up time in the STCS (from 2nd of May in 2008 to 7th of March 2017). Patients that had a Kidney or Kidney-Kidney Tpx and have a GF and no re or second Tpx are censored for mortality at the time point of GF.

## 8.2 Mortality by Tpx

For the issue of clarity, Tpx types performed in STCS are separated in frequent and rare Tpx scenarios regarding their frequency of occurrence. Rare Tpx include STCS Tpx types that are performed less than 50 times in the defined period. Figures and Tables are thus potentially given per frequent and rare Tpx (see Appendix C).

Patients that had a Kidney or Kidney-Kidney Tpx and have a GF and no re or second Tpx are censored for mortality at the time point of GF.

Remark: 39 Kidney-Kidney Tpx are included in Kidney Tpx. 2 Kidney-Kidney-Pancreas Tpx are included in Kidney-Pancreas Tpx.

## 8.3 Mortality by Tpx and centre

Figure 25: Overall survival for frequent Tpx

### Remarks:

39 Kidney-Kidney Tpx (15 (USZ), 23 (USB) and 1 (CHUV)) are included in Kidney Tpx.  
2 Kidney-Kidney-Pancreas Tpx (USZ) are included in Kidney-Pancreas Tpx. 2 Lung tpx in HUG are not included in this graph.

Patients that had a Kidney or Kidney-Kidney Tpx and have a GF and no re or second Tpx are censored for mortality at the time point of GF.

## 8.4 Mortality in first single kidney Tpx

Overall survival for patients with single kidney Tpx as first STCS Tpx is presented separated by the donor type. In Figure 27, category 'Living' is separated in 'Living, ABO c' and 'Living, not ABO c'. The letter 'c' stands for 'compatible'.

Patients that had a Kidney or Kidney-Kidney Tpx and have a GF and no re or second Tpx are censored for mortality at the time point of GF.

## 9 Graft failure and primary non-function

Failure and primary non-function in an allograft are considered as one. No distinction is therefore made in this section.

### 9.1 Graft failure

Graft failures (incl. grafts with primary non-function) are counted on organ-level (Tables 18 and 19). Table 17 gives a summary of numbers of graft failures on patient- and organ-level. In addition to, numbers of organs with primary non-function are given separately in Table 20.

## 9.2 Graft failure free survival

In the following, estimates of graft failure free survival are not adjusted for potential risk factors. In Figure 28 and 29, both single kidney and double kidney Tpx are included as mentioned previously. Also 2 Kidney-Kidney-Pancreas Tpx (USZ) are included in Kidney-Pancreas Tpx. In contrast, Figure 30 shows graft failure free survival only for patients with first STCS single kidney Tpx.

### 9.3 Cumulative incidence of graft failure

The cumulative incidence (CumInc) of a graft failure is the probability for a graft failure within the reported time period. CumInc functions for graft failure are not adjusted for potential risk factors (illustrated in Figures and Tables).

## 9.4 Graft failure and number of HLA mismatches

Figures 34-37 show cumulative incidence functions for graft failures separated by (major) tpx and the number of HLA mismatches<sup>1</sup> between donor and recipient at baseline (i. e. at timepoint of first STCS tpx). It is distinguished between mismatches for HLA-A, HLA-B and HLA-DR and the total number of mismatches of these HLA classes.

---

Figure 34: Cumulative incidence of graft failure for kidney or kidney-kidney tpx by HLA mismatches

<sup>1</sup>The number of mismatches are the number of HLA surface receptor classes of the donor not present in the recipient. If the surface receptors of the donor are homozygous, they are counted only once. Groups with less than 10 patients at time of tpx are not shown. The number of patients at risk for some tpx is lower compared to the number of tpx due to missing HLA information.

## A Cohort of all solid organ recipients transplanted since January 2008

The STCS officially started to enrol patients 1st of May 2008. By request from the Swiss Federal Office of Public Health, patients transplanted in the reporting period from 1.1.2008 until 30.4.2008 were retrospectively added to the STCS. The STCS authorities decided to capture and report only “mini-minimal” data for these patients. Therefore for the full reporting period (January 2008 to present) only data on the transplanted organ, overall mortality and failure-free survival can be presented.

### A.1 Overview

The following table lists the number of patients and Tpx performed, it shows patients according to their first STCS Tpx in the period: January 2008 - April 2008.

## A.2 Mortality by Tpx

The following figure includes all the patients transplanted in the period: January 2008 - December 2016 and is analogous to Figure 24.

---

Figure 38: Overall survival since January 2008 for frequent Tpx types

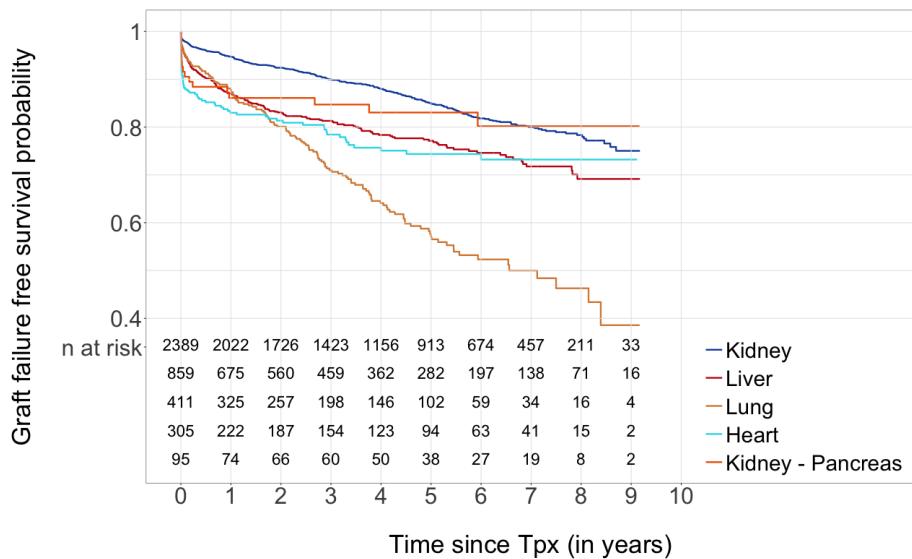

Remark: 34 Kidney-Kidney Tpx are included in Kidney Tpx. 2 Kidney-Kidney-Pancreas are included in Kidney-Pancreas. Patients that had a Kidney or Kidney-Kidney Tpx and have a GF and no re or second Tpx are censored for mortality at the time point of GF.

### A.3 Graft failure free survival

The following figure includes all the patients transplanted in the period: January 2008 - December 2016 and is analogous to Figure 28. The rate estimates for graft failure free survival are not adjusted for potential risk factors.
